

### **MAXIMUM SUPPORT FOR LARGE SPACES**

A particularly convenient feature of the Inspire Series 343 is antiphonal switching. This enables the organ to support congregational worship in large spaces where the congregation may be at some physical distance from the main organ's sound. For musical effects, the organist can transfer the organ sound with the push of a button for total surround sound, or sound from only the rear or the front of the worship space.

**INSPIRE SERIES 343**

### **AUTO-PLAY MUSIC**

The integrated Hymn Player, with 350 well-known hymn tunes, ensures that the music can continue even when the organist is absent. The organ will automatically play predetermined selections, with the ability to customize the tempo and volume. The Song Player feature allows record and playback which is beneficial in many circumstances, including when the organist also conducts the choir.
